EDUCATION

Drs. Kiran & Pallavi Patel Global University

Bachelor of Technology in Computer Science and Engineering

Vadodara, Gujarat

Nov. 2023 – June 2027

Phoenix Institute

12th Grade

Vadodara, Gujarat

July. 2023 – Feb 2027

Avalon World School

10th Grade

Vadodara, Gujarat

May. 2023 – June 2027

EXPERIENCE

Artificial Intelligence Intern (AI)

Edunet and Shell

July 2025 – August 2025

Remote

- Completed this internship on IBM Cloud through Edunet Foundation via the AICTE Internship Portal (Government of India).
- Gained hands-on experience with IBM Cloud services and AI tools.
- Worked on AI chatbot development and AutoAI projects for real-world problem solving.
- Engaged in structured learning through IBM SkillsBuild aligned with industry standards.
- Performed data analytics and visualization to derive actionable insights.
- Collaborated with mentors and industry professionals in an enterprise workflow environment.

Artificial Intelligence & Cloud Technologies Intern

Edunet and IBM

July 2025 – August 2025

Remote

- Completed this internship at Shell through Edunet Foundation via the AICTE Internship Portal (Government of India).
- Developed end-to-end machine learning pipelines for structured datasets.
- Built production-ready FastAPI services for real-time model inference.
- Performed exploratory data analysis and feature engineering to improve model performance.
- Designed modular backend architecture for scalable experimentation and deployment.

PROJECTS

Dear AI

[Live](#) | [Github](#)

- A compassionate conversational AI that acts as a trusted friend, helping users release emotional burdens with warm, non-clinical support. It uses generative AI to provide empathetic, concise responses with practical coping strategies, creating a safe, judgment-free space. I worked on the backend, developing the core AI and generative intelligence powering the conversations.

Insurance Premium Prediction API

[Live](#) | [Github](#)

- Built a machine learning-powered API using FastAPI to predict insurance premiums based on user data such as age, BMI, and lifestyle factors. Focused on creating a reliable prediction pipeline with model deployment, input validation, and fast response times.

GHG-Prediction

[Live](#) | [Github](#)

- A sustainability-focused analytics project exploring **US supply chain GHG emissions** using open data. It delivers cleaned datasets, EDA, and clear visual insights to identify high-emission industries. I built the end-to-end data pipeline, handled preprocessing, and created modular Jupyter notebooks for scalable analysis and future ML modeling.

TECHNICAL SKILLS

Languages: Python, JavaScript, C, C++, SQL

Frameworks & Technologies: React.js, Tailwind CSS, FastAPI, Pandas, RAG, PostgreSQL, Pinecone (Vector DB), LangChain, GenAI, HTML5, CSS

Developer Tools: GitHub, Docker, Linux, Networking, Footprinting, Nmap
